10 Numbers after N (For Loop) | 30/30

Easy

Write a program that reads a number `N` and prints **10** numbers after `N` .

Note

Use **For** loop.

Input

The input will be a single line containing an integer representing `N` .

Output

The output should contain **10** numbers after `N` , each on a new line.

Explanation

For example, if the given number is `N = 4` ,

- The **10** numbers after **4** are **5**, **6**, **7**, **8**, **9**, **10**, **11**, **12**, **13** and **14**.

The output should be,

```
5
6
7
8
9
10
11
12
13
14
```

code:

```
n=int(input())
for i in range(n+1,n+11):
```

```
    print(i)
```

2

Print from M to N (For Loop) | 30/30

Given two integer numbers M and N, write a program to print the integers from M to N.
Note: Use For Loop

Input

The first line of input will contain an integer.
The second line of input will contain an integer.

Output

The output should be printing an integer in each line, starting from M to N.

Explanation

For example, if the given numbers are 2 and 6, the output should be

```
2
3
4
5
6
```

Similarly, if the given numbers are -2 and 2, the output should be

```
-2
-1
0
1
2
```

Sample Input 1

```
2
6
```

Sample Output 1

```
2
3
4
5
6
```

code:

```
m=int(input())
n=int(input())
for i in range(m,n+1):
    print(i)
```

3

Sum of Numbers from M to N (For Loop) | 30/30

Given two integers M and N, write a program to print the sum of the numbers from M to N.

Input

The first line of input will contain an integer.
The second line of input will contain an integer.

Output

The output should be a single line containing the sum of the numbers from M to N.

Explanation

For example, if the given numbers are 2 and 6, the output should be the sum of the numbers from 2 to 6 (2 + 3 + 4 + 5 + 6), which is 20.

Sample Input 1

```
2
6
```

Sample Output 1

```
20
```

Sample Input 2

```
10
20
```

Sample Output 2

```
165
```

code:

```
m=int(input())
n=int(input())
sum=0
for i in range(m,n+1):
    sum=sum+i
print(sum)
```

4

Square (For Loop) | 30/30

Write a program that reads a number `N` and prints a **Square** of `N` rows and `N` columns using stars (`*`).

```
* * *
* * *
* * *
```

Note

- There is a space after every star(`*`).
- Use **For** loop.

Input

The input will be a single line containing an integer representing `N` .

Output

The output should be `N` rows and `N` columns containing stars (`*`) as a **Square** shown in the sample output.

Explanation

For example, if the given number is `N = 4` ,

- Print the stars (`*`) on **4** rows and **4** columns as shown in the given image.

code:

```
n=int(input())
for i in range(n):
    row="* "*n
    print(row)
```

5

Square - 2 (For Loop) | 25/25

Easy

Write a program that reads a number `M` and prints a **Square** of `M` rows and `M` columns using numbers.

```
1111
2222
3333
4444
```

Note

Use **For** loop.

Input

The input will be a single line containing an integer representing `M` .

Output

The output should be `M` rows and `M` columns containing numbers as a **Square** shown in the sample output.

Explanation

For example, if the given number is `M = 4` ,

- Print the numbers on **4** rows and **4** columns as shown in the given image.

code:

```
n=int(input())
for i in range(1,n+1):
    str_i=str(i)
    row=str_i*n
    print(row)
```

6

Rectangle (For Loop) | 35/35

Easy

Write a program that reads two numbers `M` and `N`, and prints a **Rectangle** of `M` rows and `N` columns using stars (`*`).

```
*****
*****
*****
*****
```

Note

Use **For** loop.

Input

The first line of input contains an integer representing `M`.
The second line of input contains an integer representing `N`.

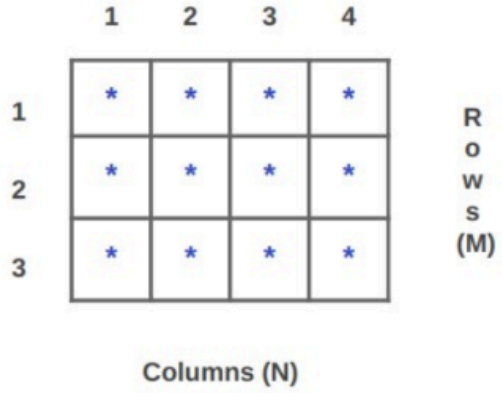

Output

The output should be `M` rows and `N` columns containing stars (`*`) as a **Rectangle** shown in the sample output.

Explanation

For example, if the given numbers are `M = 3` and `N = 4`,

- Print the stars (`*`) on **3** rows and **4** columns as shown in the given image.

code:

```python
m=int(input())
n=int(input())
for i in range(m):
    row="*"*n
    print(row)
```

7

Right Angled Triangle (For Loop) | 40/40

Easy

Write a program that reads a number `N` and prints a **Right Angled Triangle** of `N` rows using stars (`*`).

```
*
**
***
****
*****
```

Note

Use **For** loop.

Input

The input will be a single line containing an integer representing `N` .

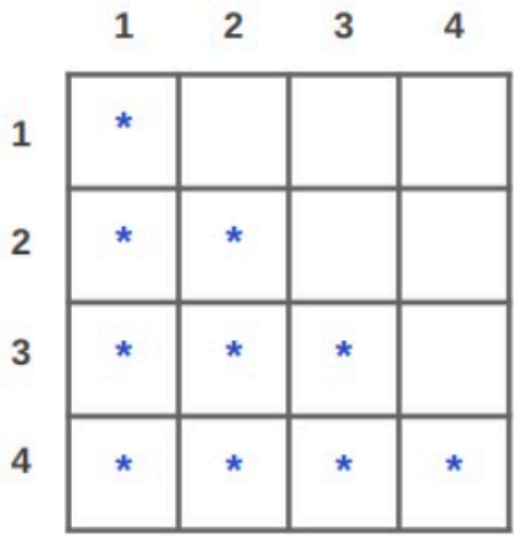

Output

The output should be `N` rows containing stars (`*`) as a **Right Angled Triangle** shown in the sample output.

Explanation

For example, if the given number is `N = 4` ,

- Print the stars (`*`) on 4 rows as shown in the given image.

code:

```
n=int(input())
for i in range(1,n+1):
    row="*"*i
    print(row)
```

8

Right Angled Triangle - 2 (For Loop) | 40/40

Easy

Write a program that reads a number `N` and prints a **Right Angled Triangle** of `N` rows using numbers.

```
1
2 2
3 3 3
4 4 4 4
```

Note

There is a space after every number.

Use **For** loop.

Input

The input will be a single line containing an integer representing `N` .

Output

The output should be `N` rows containing numbers as a **Right Angled Triangle** shown in the sample output.

Explanation

For example, if the given number is `N = 6` ,

- Print the numbers on **6** rows as shown in the given image.

code:

```
n=int(input())
for i in range(1,n+1):
    str_i=str(i)
```

```
    row=(str_i+" ")*i
    print(row)
```

9

Right Angled Triangle - 3 (For Loop) | 40/40

Easy

Write a program that reads a number `N` and prints a **Right Angled Triangle** of `N` rows using stars (`*`) and pluses (`+`).
The first `N - 1` rows contains stars (`*`) and the `Nth` row contains pluses (`+`).

```
*
* *
* * *
* * * *
+ + + + +
```

Note

There is a space after every star (`*`) and every plus (`+`).
Use **For** Loop.

Input

The input will be a single line containing an integer representing `N` .

Output

The output should be `N` rows containing stars (`*`) and pluses (`+`) as a **Right Angled Triangle** shown in the sample output.

Explanation

For example, if the given number is `N = 4` ,

- Print stars (`*`) and pluses (`+`) on **4** rows as shown in the given image.
  - The first **3** rows should contain stars (`*`).
  - The **4th** row should contain `N` pluses (`+`).

code:

```
n=int(input())
for i in range(1,n+1):
    if i==n:
        row="+ "*i
        print(row)
    else:
```

```
        row="* "*i
        print(row)
```

10

Two Right Angled Triangles (For Loop) | 40/40

Easy

Write a program that reads a number `N` and prints two **Right Angled Triangles** of `N` rows, using numbers starting from **1**.

```
1
22
333
1
22
333
```

Note

Use **For** loop.

Input

The input will be a single line containing an integer representing `N` .

Output

The output should be `2 * N` rows containing numbers as two **Right Angled Triangles** shown in the sample output.

Explanation

For example, if the given number is `N = 4` ,

- Print the numbers on **8** rows as shown in the given image. (`2 * 4 = 8`)

code:

```
n=int(input())
for i in range(1,n+1):
    str_i=str(i)
    row=str_i*i
    print(row)
for i in range(1,n+1):
    str_i=str(i)
```

```
    row=str_i*i
    print(row)
```
